

Below is the link to the data.gov Walkability Index page. This is where we downloaded our dataset from. The dataset is too large to include directly in GitHub.

<https://catalog.data.gov/dataset/walkability-index7>

There are two download links. The first “Download” will download a .zip file containing a ShapeFile that can be edited in any GIS software.

The next “API” download will download a .csv file. This .csv file is the file that we used in our code. Download this and upload it to your Google Drive along with the BostonTable.xls, RaleighTable.xls, and ChicagoTable.xls files provided in the GitHub.

Below is the link to the metadata of the Walkability Index dataset. This provides a description of each of the field names in our dataset.
